| 6 People | 0 | 0.0% |
| 7+ People | 0 | 0.0% |
| Average Nonfamily Size | 1.18 | |

| Population by Relationship and Household Type | | |
|--|-------|--------|
| Total | 2,160 | 100.0% |
| In Households | 2,064 | 95.6% |
| In Family Households | 1,756 | 81.3% |
| Householder | 577 | 26.7% |
| Spouse | 487 | 22.5% |
| Child | 634 | 29.4% |
| Other relative | 22 | 1.0% |
| Nonrelative | 36 | 1.7% |
| In Nonfamily Households | 308 | 14.3% |
| In Group Quarters | 96 | 4.4% |
| Institutionalized Population | 96 | 4.4% |
| Noninstitutionalized Population | 0 | 0.0% |

Data Note: Households with children include any households with people under age 18, related or not. Multigenerational households are families with 3 or more parent-child relationships. Unmarried partner households are usually classified as nonfamily households unless there is another member of the household related to the householder. Multigenerational and unmarried partner households are reported only to the tract level. Esri estimated block group data, which is used to estimate polygons or non-standard geography. Average family size excludes nonrelatives.

Data Note: N/A means not available.

2005-2009 ACS Estimate: The American Community Survey (ACS) replaces census sample data. Esri is releasing the 2005-2009 ACS estimates, five-year period data collected monthly from January 1, 2005 through December 31, 2009. Although the ACS includes many of the subjects previously covered by the decennial census sample, there are significant differences between the two surveys including fundamental differences in survey design and residency rules.

Margin of error (MOE): The MOE is a measure of the variability of the estimate due to sampling error. MOEs enable the data user to measure the range of uncertainty for each estimate with 90 percent confidence. The range of uncertainty is called the confidence interval, and it is calculated by taking the estimate +/- the MOE. For example, if the ACS reports an estimate of 100 with an MOE of +/- 20, then you can be 90 percent certain the value for the whole population falls between 80 and 120.

Reliability: These symbols represent threshold values that Esri has established from the Coefficients of Variation (CV) to designate the usability of the estimates. The CV measures the amount of sampling error relative to the size of the estimate, expressed as a percentage.

- High Reliability: Small CVs (less than or equal to 12 percent) are flagged green to indicate that the sampling error is small relative to the estimate and the estimate is reasonably reliable.
- Medium Reliability: Estimates with CVs between 12 and 40 are flagged yellow—use with caution.
- Low Reliability: Large CVs (over 40 percent) are flagged red to indicate that the sampling error is large relative to the estimate. The estimate is considered very unreliable.
